DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: Proper headings are needed. Appropriate correction is required.

Claim Objections

Claims 24-46 are objected to because of the following informalities: in claim 1, line 6, the term “corrisponding” should be “corresponding”. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 24-27, 29-31, 40 and 43-46 are rejected under 35 U.S.C. 102(b) as being anticipated by Lonati (3924423).

Lonati (3924423) teaches the circular knitting machine (1) as claimed including inherently a footing; a needle cylinder supported on said footing so as to be rotatable about an axis thereof, which is orientated substantially vertically, said needle cylinder having a diameter that is substantially comprised between 7 and 24 inches (standard diameter for stockings), and multiple axial slots that are formed on an outer lateral surface thereof, needles each of which is accommodated in a corresponding slot; actuation means (cams as seen in figure 4) for actuating

the needles which interact with said needles during rotation of the needle cylinder about said axis for actuation of the needles along the corresponding axial slot of the needle cylinder so that the needles form knitting with at least one yarn dispensed to the needles at least one drop or feed (1G, 2G, 3F,4F) of the machine; and wherein said needle cylinder is rotationally actuatable about said axis in both directions of rotation (figures 1a-1i) and wherein said needle actuation means are adapted to allow the needles to form knitting in both directions of rotation of the needle cylinder about said axis at least one drop or feed of the machine.

Allowable Subject Matter

Claims 28, 32-39, 41 and 42 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

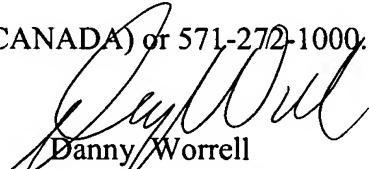

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
